AutoCAD Activation Code Timeline of coal in the U.S., as we have seen in Texas, you're not even looking at a potential industry that you can turn on again. It is the same in the West. You have to plan for either prosperity or hopelessness. Which one will you choose? It is not an issue of exporting your way to prosperity. It's not an issue of exporting your way to hopelessness. When you have 40 percent unemployment rates in your key industries, why would you put more money in the ground? Because you can't afford not to. The idea that you can export your way out of a problem is the same kind of thinking that went on in 1920 and 1929. It was an idea that led to the great depression. So the current thinking is exporting the same thinking that has led to our problems in the first place. Yes. There's no rational thought that is pro-coal, that is pro-gas, that is pro-nuclear, and so on. I don't know what you mean when you say rational thought. That's not rational thought. You're not thinking rational about it? You're not thinking rational about it. What is rational thought? If you don't like the ideas that are out there, you go out and you think. Okay, so we're going to think. Yes. You're not going to go out and buy a solar system or an electric car or a windmill, and we should be thinking what's the rational way to get the energy we need. You can't run that argument. I just want to give you a chance to defend your argument. But to tell you the truth, I have. So tell me
