What's New In?

Widgits is a USB based measurement and capture device with high resolution and precision. It allows to capture measurements and control devices with a simple usb connection. Widgits is built to offer best resolution, accuracy and calibration repeatability. With a resolution up to 5000dpi the Widgits can get the smallest smallest details. It can be used to measure dots, lines, curves, 3D shapes, profiles, other devices and mechanical parts, even the smallest micro-structures like those you can find on polished silicon surfaces. With software based on advanced digital signal processing algorithms the Widgits can calculate the profile of any objects and then automatically capture it. To speed up the capture process and making the measurement easier you can capture up to 100 images in a seconds, any number of images in one go or can measure several objects at the same time. The Widgits is easy to use and requires no calibration, because it comes with an integrated calibration module and calibration software. The Widgits will capture measurements with very high accuracy and will perform well even at low light levels. You can attach Widgits to a wide variety of surfaces. Widgits allows to capture high quality measurements directly on the surface and by that it can reduce the measurement time a lot. Widgits comes with a unique USB interface, that allows to use Widgits with any other usb based application. For example you can use it with CAD, CAM and CAE systems, and other measurement software. You can also use Widgits with any other measurement software. It's an ideal companion for medical, semiconductor, automotive, industrial and many other industries. ,
